Sustainable Community of the Year

In the space below, explain the community's design features that incorporate energy efficiency, conserve natural resources, explore new technologies, and promote recycling. Briefly describe your success in incorporating these features. Attach additional sheets if necessary. Inclusion of the company or project name on this form will result in the entry's elimination from competition.

1. Describe any general site features that support sustainable development, such as solar lot orientation, native or drought-tolerant vegetation and nearness to shopping or public transit.

2. Describe recycling procedures or efforts to reduce construction waste.

3. Describe energy-efficiency features on the plan submitted such as insulation, glazing and HVAC system.

4. Describe any features that conserve water.

5. Describe any special materials used in construction.

6. Describe any additional features not covered above.
